

Team Working Agreement

Course: COMP 4350

Project Name: Palette

Team Name: The Best Team

Date Created: 2026-09-25

Team Members

Name	Program / Year (optional)	Preferred Name / Pronouns (optional)
Junyi Hu	Computer Science / 4th	N/A
William Gore	Computer Science / 4th	He/Him / Will
Arion Kennedy	Computer Science / 4th	He/Him / Arion
Israel Ijiekhuamen	Computer Science / 4th	He/Him / Ezy
Alexandre Brakel	Computer Science / 4th	N/A
Binal Chhodavadiya	Computer Science / 4th	He/Him / Binal

1. Shared Team Goals

As a team, we agree that our shared goals for this project are:

- Low stress, start early commit often
- Having a product we can be proud of and put on our resumé
- Learn new technologies, such as React Native and Docker

2. Individual Goals

Each team member lists their personal goals for this project.

Team Member	Individual Goals
Junyi Hu	Having a product that I'm comfortable to talk about
William Gore	Improve my ability to take a project from start to finish
Arion Kennedy	Learn CI / CD Pipelining, Learning new Technologies
Israel Ijiekhuamen	Learn new technologies, Master GIT
Alexandre Brakel	Learn about docker and containerization, create a high quality project that I am proud of.
Binal Chhodavadiya	Learn new Software Engineering principles to make scalable products in future.

3. Roles and Responsibilities

Roles may rotate unless otherwise specified. Note: none of these are developer roles. You are all responsible for development as well and these are just recommended additional roles to define.

Role	Description	Assigned To
Project Coordinator	Organizes meetings, tracks deadlines	Arion
Technical Lead	Oversees technical decisions and code quality	By feature
Documentation Lead	Maintains README/docs	Rotating
GitLab Manager	Manages repo structure, merges, issues	Arion / Alexandre
Quality Checker	Reviews work before submission	Junyi / Israel

If responsibilities are shared or rotated, describe how below:

Documentation Lead will rotate depending on who is working on a given component. It will be expected that they will mainly work on the documentation pertaining to their work.

For every feature 1-2 Technical leads will be selected to oversee it.

4. Communication Plan

Primary communication channel(s): Discord

Expected response time:

- Weekdays: 12 waking hours
- Weekends: 24 hours (If away and unable to respond for longer period make team aware)
- During critical deadlines: Within 1 - 3 Hours

When is escalation required?

(e.g., no response after 24–48 hours, missed meeting, blocked progress)

- After response time expires
 - Missed meetings
 - Not responding for critical features
-

5. Meetings

Regular meeting time(s): Wednesdays 4pm for in person, based on team planning on discord

Meeting platform/location: discord & in person

Meeting norms (check all that apply):

- ☒ Loose itinerary
- ☒ Start/end on time
- ☒ Action items documented
- ☒ Everyone contributes

What happens if someone cannot attend?

- Provide advanced notice (morning of)
 - Provide meeting minutes for meetings
-

6. Work Expectations

- How tasks will be assigned (e.g., issues, task board): GitHub issues
 - Definition of “done” for a task: Acceptable by multiple people, acceptance criteria met.
 - Expectations around code quality / documentation: Comment your code, self explanatory code as much as possible, include tests. Follow SRP.
-

7. Conflict Resolution & Unmet Expectations

If conflict arises or expectations are not met, we agree to follow this process **in order**:

1. Talk to them directly
2. Bring it to the group
3. Bring it to the instructor

How will concerns be raised respectfully?

Group members will contact the missing person respectfully. If a pattern of behaviour emerges after the group reaches out, the concerns will be brought to the instructor.

8. Responsible GenAI Use

As a team, we have discussed the responsible and ethical use of Generative AI tools (e.g., ChatGPT, Copilot) for this project. We agree on the following shared norms:

Allowed uses of GenAI in this project include:

- As long as you understand the output
- Cleaning up your code
- Debugging WITHOUT including secrets • Adding missing edge cases for tests

Disallowed uses of GenAI in this project include:

- Slop PRs
- Not reading/ understanding what it generates
- Design direction decisions

Key risks we have identified related to GenAI use (e.g., correctness, over-reliance, fairness, integrity):

- Code quality
- Poor isolation

How our team will ensure transparency, accountability, and shared understanding of AI-assisted work:

- Identify when code is AI generated
 - Follow team agreement
-

9. Accountability

If a team member repeatedly misses deadlines or responsibilities, the team will:

- Re-assign the task if it closes in on deadlines
- Communicate with the missing member and ask them if there are issues outside of their responsibilities that is causing them to miss deadlines
- Communicate with the group
- Communicate with the professor as a last resort

(Be explicit — vague answers are not acceptable.)

10. Agreement

By signing below, we confirm that we have discussed this document together and agree to follow it.
